Your records. Ready to print.

Free templates for students and clubs. No account needed.

A simple handout for organizing recorded data. The builder formats your entries; it does not calculate elevation or wind.

1 Choose the format and fit

Measure the usable space on your equipment. The sizes below are starting templates, not a universal fit. A scope cap is measured inside the lid, clear of its rim and hinge.

2 Add your own records

Leave the value fields empty for write-in cards, or enter your recorded data in the builder. Check distance and angular units. Changing yd/m or MIL/MOA labels does not convert your numbers.

3 Set quantity, then print

In the builder choose Print, then the number of cards. Check the calculated page or label count. Leave the printer Copies setting at 1. Print at 100% / Actual size; check the scale and fit one paper copy before printing the rest.

Choose a blank PDF

Stock card	3 x 2.12 in	Letter	A4
Scope-cap card	2 in diameter	Letter	A4
Arm board	5 x 3 in	Letter	A4
Wallet card	3.5 x 2 in	Letter	A4
Match notes	5 x 3 in	Letter	A4
Range log	Full page	Letter	A4

These downloads contain one card per page. For multiple cards on a sheet, use the builder. Card artwork is unchanged; the range log follows the selected paper size.
